

FitBuddy AI — Project Idea & Problem Statement

Phase 1: Brainstorming & Ideation

Project purpose

FitBuddy AI is a wellness web application that generates a structured 7-day activity plan, provides a practical nutrition/recovery tip, stores results in SQLite, and supports feedback-based plan revision.

Problem statement

Users need a simple workflow for entering a profile, receiving a structured wellness plan, reviewing a practical tip, and requesting a revision when the plan needs adjustment.

Project scope

- Personalized 7-day wellness/activity plan generation
- Nutrition/recovery guidance
- Feedback-driven plan revision
- Persistent storage and REST APIs
- Responsive browser interface and automated tests

Source limitation

The supplied documentation does not include the actual Python source files. Therefore, this document records the documented behavior and structure rather than inventing code-level implementation details.
