

FitBuddy AI — User Needs & Empathy Analysis

Phase 1: Brainstorming & Ideation

Primary user inputs

- User ID
- Name
- Age
- Weight
- Goal
- Preferred intensity

User needs

- A clear profile form
- A structured 7-day result
- A practical nutrition/recovery tip
- A way to request a concrete change
- A simple browser-based experience

Observed workflow

The supplied project documentation describes profile collection, plan generation, feedback submission, and display of the updated plan.

Design implication

The interface should keep the main journey linear: enter profile → generate plan → review result → submit feedback → view revised result.
