

FitBuddy AI — Feature Ideation & Prioritization

Phase 1: Brainstorming & Ideation

Core features

- 7-day plan generation
- Nutrition/recovery tip
- Feedback-based revision
- SQLite persistence
- JSON REST APIs
- All-users/admin view
- Input validation
- Automated tests
- Responsive UI

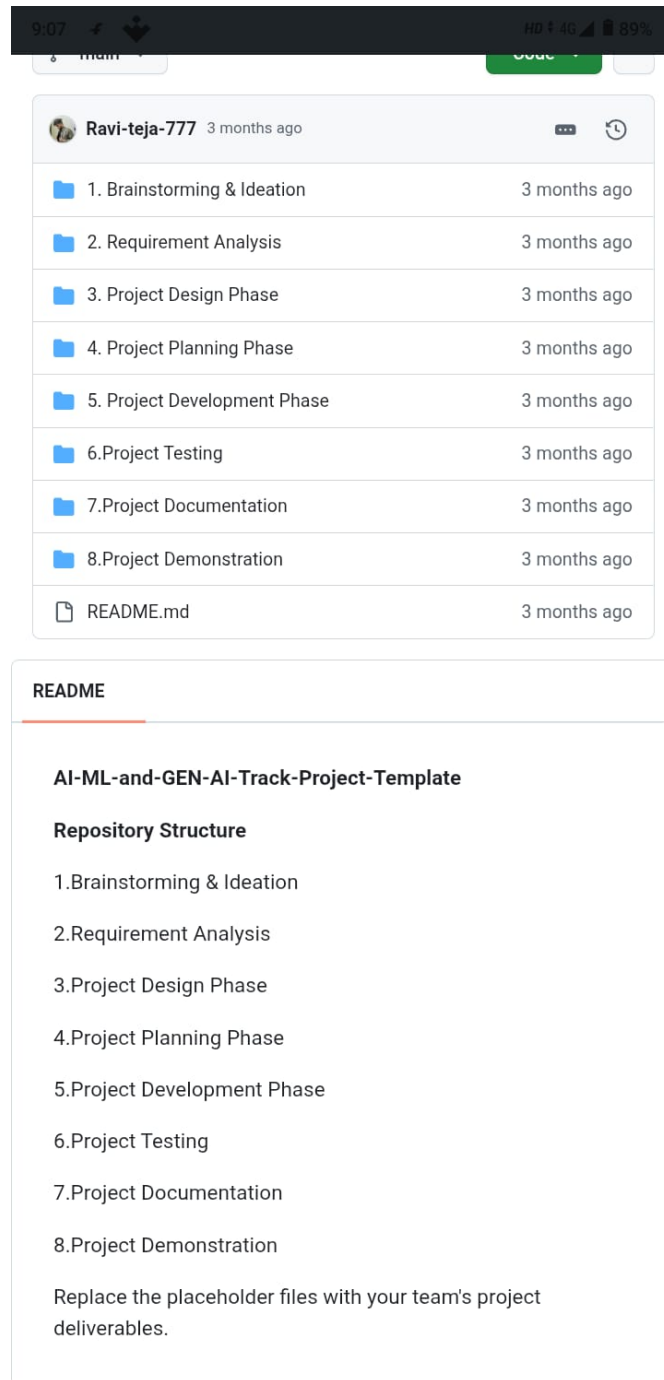

AI capability

The project uses the Google GenAI SDK / Gemini for plan and tip generation when Gemini mode is enabled; demo mode allows local verification without a Gemini API key.

Prioritization basis

For a demonstration, the essential flow is plan generation and revision. Supporting features include persistence, API access, validation, testing, and administration.
