

FitBuddy AI — Functional Requirements

Phase 2: Requirement Analysis

User management

- Collect User ID, name, age, weight, goal, and preferred intensity.
- Validate user input before processing.

Plan generation

Generate a structured 7-day wellness/activity plan and a nutrition/recovery tip.

Revision

Accept a concrete feedback request and display the latest updated plan.

Persistence

Store generated results using SQLite with SQLAlchemy.

APIs

- GET /api/health
- POST /api/generate
- POST /api/feedback
- GET /api/users
