

FitBuddy AI — System Architecture

Phase 3: Project Design Phase

Architecture layers

- Browser UI using Jinja2 templates and responsive CSS
- FastAPI application and routes
- Pydantic request/response validation
- Gemini integration through Google GenAI SDK
- SQLite persistence through SQLAlchemy

Application entry

The documented entry point is `app/main.py`; application/API routes are in `app/routes.py`.

Supporting modules

Configuration, database handling, models, schemas, Gemini generation, and updated-plan behavior are documented as separate modules.
