

FitBuddy AI — Backend Development

Phase 5: Project Development Phase

Backend structure

- app/main.py — FastAPI entry point
- app/routes.py — application and API routes
- app/config.py — configuration
- app/database.py — database setup
- app/models.py — persistence models
- app/schemas.py — validation schemas

Server

Uvicorn serves the FastAPI application. The documented command is `python -m uvicorn app.main:app --reload`.

Validation

Pydantic-based schemas are used for request/response validation.
