

FitBuddy AI — Project Executable & Setup Files

Phase 7: Project Documentation

Safe project files supplied

- README.md
- requirements.txt
- .env.example
- .gitignore

Setup procedure

- Create .venv
- Activate it
- Install dependencies
- Copy .env.example to .env
- Set DEMO_MODE as appropriate
- Run Uvicorn
- Run pytest

Excluded secret

The uploaded .env contains credential-like values and is intentionally not included in this package. The documentation advises keeping .env out of Git.
