

FitBuddy AI — Scalability & Future Plan

Phase 8: Project Demonstration

Documented extension points

- Gemini model settings are configurable through .env
- REST APIs provide a clear integration surface
- SQLite/SQLAlchemy provides a persistence layer
- The project separates routes, schemas, models, configuration, AI generation, and revision behavior

Future work

Potential future work can be planned around deployment, stronger authentication, richer analytics, broader testing, and additional wellness features. These are proposed extensions, not features documented as already implemented.
